* **Make** water usage - SMART

By making people conscious and aware of how water is being use gives the opportunity to pass that positive behaviour to the next generations.

Currently, people use water in a very unconscious way therefore the tools in terms of tech and innovation to increase this are imperative. In order to have a reduction in water usage footprint, ~~that~~ and give smart solutions ~~that~~ and gather important data that could be use further to improve the start-up solution.

I have the power

- what were the main times within a daily, weekly & monthly scheme, a annually
- when the set of alarms were more continuous / discontinue
- Frequency of flowing reduction
- End of the year / month → Tips of how can I ~~use~~ make my usage more "SMART"
